Terminal Disclaimer

1. The terminal disclaimer filed on 6/12/06 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6,870,895 has been reviewed and is accepted. The terminal disclaimer has been recorded.

REASONS FOR ALLOWANCE

2. Claims 1, 2, 7, 8, 11, 12, 14, 15, 20, 21, 24, 25, 30, 31, 37, 38, 43, 44, 47, 48, 53, 54 and 57-96 are allowed.

Claims 1, 2, 57, 61, 75 and 80 are allowed for the same reasons as indicated in the last office action (mailed on 3/10/06), i.e., applicant's arguments filed on 12/30/05 are found persuasive that the prior art of record fails to disclose or suggest the limitation, in combination with other limitations in the claims, the first potential (inputted to a second electrode of the capacitor) is one of a high level and a low level of the digital signal since the closest prior art (Tam, USP 6,628,146) discloses a first potential (ground which is 0V) rather than one of the high level and the low level of the digital input signal (the input as shown in Figures 4 and 5 takes on a low level of approximately 0.5V and a high level of approximately 1.5V).

Claims 14, 24, 37 and 47 are allowed because they depend on claim 1.

Claims 15, 25, 38 and 48 are allowed because they depend on claim 2.

Claims 58-60, 62-64, 76-79 and 81-89 are allowed because they depend on claims 57, 61, 75 and 80, respectively.

Art Unit: 2816

Claims 7, 65 and 85 are allowed for the same reasons as indicated in the last office action (mailed on 3/10/06), i.e., the prior art of record fails to disclose or suggest, in combination with other limitations, a circuit including first and second capacitors, wherein the switch is turned on and a first potential is input to the second electrode of the first capacitor and a second potential is input to the fourth electrode of the second capacitor during a reset period, and wherein the digital signal is input to the second electrode of the first capacitor and to the fourth electrode of the second capacitor during a sampling period after the reset period as recited in the claims.

Claims 11, 20, 30, 43 and 53 are allowed because they depend on claim 7.

Claims 66-69 and 86-90 are allowed because they depend on claims 65 and 85, respectively.

Claims 8, 70 and 91 are allowed for the same reasons as indicated in the last office action (mailed on 3/10/06), i.e., the prior art of record fails to disclose or suggest, in combination with other limitations, a circuit including first and second capacitors, wherein the first and second switches are turned on to input a first potential to the second electrode of the first capacitor while the fourth switch is turned on to input a second potential to the fourth electrode of the second capacitor during a reset period, and wherein the third switch is turned on to input the digital signal to the second electrode of the first capacitor while the fifth switch is turned on to input the digital signal to the fourth electrode of the second capacitor during a sampling period after the reset period as recited in the claims.

Claims 12, 21, 31, 44 and 54 are allowed because they depend on claim 8.

Claims 71-74 and 92-96 are allowed because they depend on claims 70 and 91, respectively.

Art Unit: 2816
